Description

From a technical point of view the top shell of the V37 is a highly resistant structure as shown by the results of the numerous tests carried out. The internal capacity of 37 litres with a maximum internal load of 10kg is a notable increase compared to that of the V35 model and provides the added benefit of being able to store one modular helmet in each case. The ergonomic line of the V37 is also advantageous for the pillion who can position their legs more comfortably due to the compact size of the V37 case.

Finally, the 4-point MONOKEY SIDE fastening system, adopted on the V37 case, is designed to be compatible with all GIVI PLX and PLXR fastening systems.

Particular attention is also placed on safety; in fact this GIVI case is equipped with the Security Lock system and the lock barrels in a pair of V37 cases can be matched to other products within the GIVI range which are supplied with a Security Lock as standard.

**Does not work with bike model FZ-1 2006-2016
